

C2B2 invites to a one-day conference in Luleå:

# CO-EXISTING WITH ICE – in a changing climate

Ice is a phenomenon of great significance. Not only as an obstacle that must be tackled with icebreakers for maritime traffic to pass through, but also as an integral component of the infrastructure when sea inlets turn into surfaces drivable by different vehicles like cars and trucks. A number of factors now affect the conditions of this medium. Climate change is one factor. Added to this are new constructions in the waters that influence shipping routes, which in turn have an impact on the ice.

C2B2 is now inviting to a one-day conference in **Luleå** on **March 17** in the frame of the research program's LivingLab North, bringing together researchers, government agencies, and various stakeholders whose work concerns the waters of the northern sea basins.

Meet: Camilla Sandström and Matilda Marshall, **Umeå University**, Per Pemberton, **SMHI**, Göran Björk, **University of Gothenburg**, Vasiola Zhaka, **Luleå University of Technology** and **Uppsala University**, Jonas Ringsberg, **Chalmers University of Technology**, Maria Bännstrand, **RISE**, Björn Garberg, **Trafikverket**, Arttu Polojärvi, **Aalto University**, Patrik Zetterkvist, and Lars Mandahl, **Municipality of Luleå**.
