

MISTRA C2B2 PRESENTS ONLINE BREAKFAST CLUB INNOVATION TALKS

Windpower in the Southern Baltics

Meet

ANDREAS SKRIVER HANSEN, CRT BORNHOLM

Moderated in English by

TORSTEN LINDERS, UNIVERSITY OF GOTHENBURG

Wind power is more than an environmentally friendly way of producing energy. It also affects both the visual appearance of an area and accessibility. But a community can also change in a positive direction when wind power becomes part of the local area.

These are some of the factors that Andreas Skriver Hansen, a researcher at the Centre for Regional & Tourism Research on Bornholm (CRT), has studied in greater detail.

We are now delighted to welcome him to C2B2's lecture series, where he will share more of his insights. In his seminar Andreas Skriver Hansen will focus on the energy project Energiø Bornholm and the effect it has for the island and its citizens.

Join the 45-minutes seminar on Teams, [click here](#).

No pre-registration needed.
